

# **Most successful cashout method with tips & vulnerabilities for PayPal – July 2017**

**lunis – 07/2017**

## **Introduction:**

PayPal has been doing well in patching up their previous vulnerabilities and over the years it has been a cat and mouse game between PayPal and Fraudsters. Methods to exploit PayPal will be made by fraudsters and as soon as PayPal sees an increase in fraud within their organization, they will patch up that specific vulnerability which was exploited by the fraudsters. Therefore methods of cashing out PayPal only last a couple of months then it won't work anymore. I spent a lot of time experimenting, researching and testing different methods to cash out PayPals and CC's. I will explain to you a very simple and easy way that ive been having success with lately and along with the explanation I'll give you some advice and tips you can use to try other methods!!

## **Tips:**

- Paypal accounts opens up without verification much more often on MOBILE devices.
- PayPal makes easier payments on MOBILE devices.
- Applications on MOBILE devices do not require a user-agent to be similar.
- Applications on MOBILE does not require you to have an IP too close to accountholder.

So the tip in general here is: USE MOBILE DEVICES OR EMULATORS FOR PAYPAL CASH OUTS.

Many times I fail to open an account on my PC, but will open it immediately afterwards on mobile device. Cashing out has also been much easier on mobile. All I use is a VPN and set it in the same state / country as account holder. Good mobile VPNs are ExpressVPN and HIDEMYASS.

## **Method:**

I'm sure there are many other sites whereby you can do this with so feel free to experiment and test different sites. I've had the most success on G2A.com and I found that their security is not up to standard. They also deliver Gift card instantly after payment.

Here's what you do:

1. Get a PayPal account from KapteinV in Hansa. These are the only accounts that work<sup>9</sup>. Register the G2A account profile with the details of the PayPal account. Use the PayPal fulls as your identity in g2a.com.
2. Download G2A app for android/IOS – Don't use the normal browser on mobile, it will defeat the purpose.
3. Set VPN on closest area of PayPal account. It seems it works as long as you are in the same country at least. If it's a USA account then try to be in same state.
4. Create a new account on g2a.com with another email address and verify the email address. You must use a fake email address and NOT the Email address of the PayPal account.
5. Go to profile page and enter the details of the PayPal accountholder.
6. Proceed to the marketplace and select some eGiftCards – Steam, Amazon and iTunes carry the most value at exchanges. Keep the total amount of the purchase below \$250 per transaction. It seems like they request verification for transactions above \$250.
7. Go to checkout and choose PayPal as your method of payment. It will take you to the PayPal checkout page where you will be asked to enter your PayPal logins. Enter the details and pay!! It will be successful 60% of the time!!
8. E-Giftcard codes are delivered instantly on the checkout page after successful payment!!
9. Go to localbitcoins.com or paxum.com to sell your egift codes for BTC!! No verification required!

Two reasons why this is successful is :

- You can use a different PayPal email address than the email of your G2A account.
- Giftcards are delivered instantly and no verification process will be conducted.

PS. Remember guys: Fraud and cashing out stolen Accounts and Cards are Always a Gamble!!

Sometimes it works and sometimes it doesn't!! For unknown reasons payments will decline and we have to accept that we cannot cashout 100% of the time!

Having said that, as your knowledge and skills increase, your succesrate will increase. But not even the best carder hits every single time he tries. If you fail, get over it and try again. Sooner or later you will hit!

Kind regards

lunis
